

**Patent Application Number: New Application Filed Herewith**

**In the Specification**

**Page 2, lines 24-28**

Please amend the paragraph bridging the above-noted lines on page 2 as follows:

The heart is a series of pumps that are carefully controlled by a very special electrical system. This electrical system attempts to regulate the heart rate between 60 and ~~100~~150 beats per minute. With normal conduction, the cardiac contractions are very organized and timed so that the top chambers (the atria) contract before the lower chambers and the heart rate is maintained between 60 and ~~100~~150 beats per minute.
